STATEMENT OF RELEVANCY

Reference AO (JP 6-222839) on Form 1449:

Please note that it discloses that a mechanism, as the object of control, includes a controller which controls two model areas having independent characteristics, and an another controller which controls a transient change areas having an intermediate characteristics between the two independent characteristics. The mechanism decides a degree as to whether the model areas or the transient change areas should be controlled based on state value such as a position or a operating force, etc., and determines each weight value to be multiplied a output value of each controller such that the sum of the weight values becomes 1.

Reference AP (JP 10-110818) on Form 1449:

Please note that it discloses a slip control device determining a clutch control command value according to a coefficient, a state quantity and a controlled value-deviation which have been calculated so as to meet a responsiveness and a stability of a system which feedback-controls a slip state of the clutch.
